

My name is Christiana Constantinou.

I am 16 years old, I live in Cyprus and I am a first lyceum class student at the Omodos School.

As far as it concern studying at home, I decided to study in depth about reducing waste, and reuse practices, because my family and I are dealing with composting and producing fertilizer for our garden. Over the past years, I have learned many things about composting and now I learned a great deal about recycling in general.

The interactive activity in the classroom, with all my friends participating the LOOP program, was an amazing experience, learning from each other! The only thing I would change is the lack of time. Due to coronavirus pandemic we didn't have the opportunity to be better prepared.
